

XSTRAT Pro v1.0.0

Windows Installation Guide

A quick guide for installing XSTRAT Pro and XSTRAT MD Pro on Windows.

Before you begin

Use the official installer **XSTRAT Pro v1.0.0.exe**. Windows may ask for permission to make changes to your device. The installer should identify the publisher as **NEXTRA GROUP AG**.

If you are upgrading an existing XSTRAT installation, the installer uses the established XSTRAT location so your existing database/workspace folders remain in place.

Install XSTRAT Pro

1. **Open the installer.** Double-click XSTRAT Pro v1.0.0.exe. If Windows displays a User Account Control prompt, confirm that the publisher is NEXTRA GROUP AG and select Yes.
2. **Choose your language.** Select English, German, French, Italian or Spanish. The installation screens and Terms of Use will use the selected language.
3. **Review and accept the Terms.** Read the Terms of Use and accept them to continue. Installation cannot proceed without acceptance.
4. **Confirm the installation options.** The default installation location is your Documents\XSTRAT folder. You can also choose whether to create desktop shortcuts for XSTRAT App, XSTRAT Manager Dashboard and START_HERE.
5. **Install.** Continue through the wizard and select Install. The installer installs both XSTRAT Pro and XSTRAT MD Pro.
6. **Finish.** At the end of installation, START_HERE is selected to open by default. Select Finish.

First launch

- Open XSTRAT App from the Start menu (or your desktop shortcut, if selected).
- If access is not already active, open Setup → Access and install the access token supplied by your organisation.
- Open XSTRAT Manager Dashboard and install the same organisation access token if required.
- Recommended browsers: Google Chrome or Microsoft Edge.

Existing XSTRAT users

XSTRAT Pro is designed as an in-place upgrade. The established application paths are retained. If your existing token or local workspace state is already available in the browser/profile you use, you may be able to continue without re-entering it. If not, simply install the organisation token again from Setup → Access.

If something does not look right

- Installer will not start: verify that you downloaded the official signed installer and that Windows shows NEXTRA GROUP AG as the publisher.
- XSTRAT asks for a token: use Setup → Access and install the organisation access token provided to you.
- Existing database does not appear automatically: open your existing XSTRAT database file from within XSTRAT. The installer does not delete your database/workspace folders.
- Need the user manual: open Help inside XSTRAT Pro or XSTRAT MD Pro.
