

XSTRAT Pro v1.0.0

macOS Installation Guide

A quick guide for installing XSTRAT Pro and XSTRAT MD Pro on macOS.

Before you begin

Use the official installer **XSTRAT Pro v1.0.0.pkg**. macOS may ask for Touch ID or an administrator password. The installer is signed and Apple-notarized for **NEXTRA GROUP AG**.

If you are upgrading an existing XSTRAT installation, the installer uses `/Users/Shared/XSTRAT` so your existing token, database and workspace folders remain in place.

Install XSTRAT Pro

1. **Open the installer.** Double-click XSTRAT Pro v1.0.0.pkg. macOS may ask you to confirm the installer or allow it to continue.
2. **Choose the Terms language.** On the Licence screen, select English, German, French, Italian or Spanish as required.
3. **Review and accept the Terms.** Read the Terms of Use, select Continue, then Agree. Installation cannot proceed without agreement.
4. **Select the destination.** Choose Install for all users of this computer and continue. XSTRAT uses the established `/Users/Shared/XSTRAT` location.
5. **Install.** Select Install and authorise with Touch ID or an administrator password if requested. The installer installs both XSTRAT Pro and XSTRAT MD Pro.
6. **Finish.** When macOS confirms that the installation completed successfully, select Close.

First launch

- Open XSTRAT App from the Applications folder. This launches XSTRAT Pro.
- If access is not already active, open Setup → Access and install the access token supplied by your organisation.
- Open XSTRAT Manager Dashboard from Applications for XSTRAT MD Pro, and install the same organisation access token if required.
- Recommended browsers: Google Chrome or Microsoft Edge.

Existing XSTRAT users

XSTRAT Pro is designed as an in-place upgrade. The established `/Users/Shared/XSTRAT` path and launcher names are retained, and existing token, database and workspace folders remain in place. If your existing browser/profile state is already active, you may be able to continue without re-entering the token. If not, install it again from Setup → Access.

If something does not look right

- Installer will not start: verify that you downloaded the official XSTRAT Pro v1.0.0.pkg. It is signed and Apple-notarized for NEXTRA GROUP AG.
- XSTRAT asks for a token: use Setup → Access and install the organisation access token provided to you.
- Existing database does not appear automatically: open your existing XSTRAT database file from within XSTRAT. The installer does not delete your database/workspace folders.
- Need the user manual: open Help inside XSTRAT Pro or XSTRAT MD Pro.
